

# Synergy Grants 2022 Outcomes Factsheet

# Synergy Grants

- The Synergy Grant scheme supports outstanding multidisciplinary teams of investigators to work together to answer major questions that cannot be answered by a single investigator.
- The scheme is intended to foster collaboration between diverse researchers to ensure a range of skills and perspectives are brought to the research problem.
- The scheme provides \$5 million of funding over 5 years to support high-performing research teams.
- The 2022 Synergy Grant round is the third round for this scheme and funds grants commencing in January 2023.
- This year's Synergy Grant funding allocation from the Medical Research Endowment Account (MREA) was \$50 million.

### Synergy Grant outcomes

- Ten high-performing health and medical research teams from across the country have been funded in this round.
- The teams comprise diverse researchers by gender, career stage and cultural background.

#### Table 1. Statistics for applications received and awarded in 2022 (2021)

| Total number of applications received     | <b>69</b> # (86^)    |
|---|----------------------|
| Number of grants awarded                  | <b>10</b> (17*)      |
| Percentage of applications awarded grants | <b>14.5%</b> (19.8%) |

# One of the 69 applications was ruled ineligible.

^ Three of the 86 applications were ruled ineligible.

\* For the 2021 Synergy Grants round, NHMRC increased the MREA funding allocation from \$50 million to \$85 million to partially offset the impact of cancelling the 2020 round due to impacts of the COVID-19 pandemic.

#### Table 2. Statistics for application and grant team sizes 2022 (2021)

| Average application team size | <b>8.0</b> (8.1) |
|-------------------------------|------------------|
| Average grant team size       | <b>8.3</b> (8.2) |

#### **Outcomes by Broad Research Area**

• NHMRC is committed to supporting a broad range of research from discovery science through to clinical research, health services research and public health research. Synergy Grants will be funded in each of these Broad Research Areas.

| Broad Research Area                       | Year | Applications | Grants | Funded rate | Proportion of grants awarded | Total value  |
|---|------|--------------|--------|-------------|------------------------------|--------------|
|   | 2019 | 19           | 4      | 21.1%       | 40.0%                        | \$20,000,000 |
| Basic Science research                    | 2021 | 20           | 3      | 15.0%       | 17.6%                        | \$15,000,000 |
|   | 2022 | 21           | 3      | 14.3%       | 30.0%                        | \$15,000,000 |
|   | 2019 | 21           | 3      | 14.3%       | 30.0%                        | \$15,000,000 |
| Clinical Medicine and<br>Science research | 2021 | 38           | 8      | 21.1%       | 47.1%                        | \$40,000,000 |
|   | 2022 | 33           | 4      | 12.1%       | 40.0%                        | \$20,000,000 |
|   | 2019 | 15           | 2      | 13.3%       | 20.0%                        | \$10,000,000 |
| Health Services research                  | 2021 | 12           | 1      | 8.3%        | 5.9%                         | \$5,000,000  |
|   | 2022 | 4            | 1      | 25.0%       | 10.0%                        | \$5,000,000  |
|   | 2019 | 9            | 1      | 11.1%       | 10.0%                        | \$5,000,000  |
| Public Health research                    | 2021 | 16           | 5      | 31.3%       | 29.4%                        | \$25,000,000 |
|   | 2022 | 11           | 2      | 18.2%       | 20.0%                        | \$10,000,000 |

#### Table 3. Statistics by Broad Research Area - 2019, 2021 and 2022\*

\* NHMRC cancelled the 2020 Synergy Grants round due to the impacts of the COVID-19 pandemic.

#### Outcomes for CIAs by career stage

• Most CIAs have held their PhD for at least 10 years.

| Career Stage                    | Year | Applications | Average years post-PhD of applicants | Grants awarded | Average years post-PhD of awardees | Funded rate |
|---------------------------------|------|--------------|--------------------------------------|----------------|------------------------------------|-------------|
|                                 | 2019 | 4            | 6.3                                  | 1              | 2.0                                | 25.0%       |
| Less than 10<br>years post-PhD  | 2021 | 5            | 6.8                                  | 0              | -                                  | 0.0%        |
|                                 | 2022 | 2            | 5                                    | 0              | -                                  | 0.0%        |
| Equal to or                     | 2019 | 55           | 21.2                                 | 8              | 23.6                               | 14.5%       |
| greater than 10                 | 2021 | 74           | 21.9                                 | 16             | 21.8                               | 21.6%       |
| years post-PhD                  | 2022 | 63           | 21.6                                 | 8              | 21.5                               | 12.7%       |
|                                 | 2019 | 5            | -                                    | 1              | -                                  | 20.0%       |
| Do not hold a<br>PhD/Not stated | 2021 | 7            | -                                    | 1              | -                                  | 14.3%       |
|                                 | 2022 | 4            | -                                    | 2              | -                                  | 50.0%       |

#### Table 4. Statistics by CIA career stage - 2019, 2021 and 2022

#### Outcomes for all CIs by Career Stage

- Cls less than 10 years post-PhD averaged 5.7 years post-PhD, with a 16.9% funded rate.
- Cls equal to or greater than 10 years post-PhD averaged 21.0 years post-PhD, with a 14.1% funded rate.
- Those awardees who do not hold a PhD (or did not state that they hold a PhD) had a funded rate of 18.2%.

#### Table 5.Statistics by CI career stage - 2019, 2021 and 2022

| Career Stage                    | Year | Applications | Average years post-PhD of applicants | Grants awarded | Average years post-PhD of awardees | Funded rate |
|---------------------------------|------|--------------|--------------------------------------|----------------|------------------------------------|-------------|
|                                 | 2019 | 120          | 5.3                                  | 13             | 4.5                                | 10.8%       |
| Less than 10<br>years post-PhD  | 2021 | 150          | 5.5                                  | 26             | 4.8                                | 17.3%       |
|                                 | 2022 | 130          | 5.7                                  | 22             | 5.1                                | 16.9%       |
| Equal to or                     | 2019 | 308          | 20.5                                 | 45             | 20.2                               | 14.6%       |
| greater than 10                 | 2021 | 479          | 20.3                                 | 97             | 20.4                               | 20.3%       |
| years post-PhD                  | 2022 | 377          | 21.0                                 | 53             | 21.7                               | 14.1%       |
|                                 | 2019 | 57           | -                                    | 11             | -                                  | 19.3%       |
| Do not hold a<br>PhD/Not stated | 2021 | 64           | -                                    | 17             | -                                  | 26.6%       |
|                                 | 2022 | 44           | -                                    | 8              | -                                  | 18.2%       |

#### Funded rates for CIAs by gender

- More men than women applied as CIAs in 2019, 2021 and 2022.
- The funded rate has been higher for female CIAs than for male CIAs in 2019, 2021 and 2022.

#### Table 6.Statistics by CIA gender - 2019, 2021 and 2022

|      | Female CIA |        |                |                         |            | Male   |                | CIA gender other#       |            |        |                |                         |
|------|------------|--------|----------------|-------------------------|------------|--------|----------------|-------------------------|------------|--------|----------------|-------------------------|
| Year | Applicants | Funded | Funded<br>rate | Proportion<br>of grants | Applicants | Funded | Funded<br>rate | Proportion<br>of grants | Applicants | Funded | Funded<br>rate | Proportion of<br>grants |
| 2019 | 29         | 6      | 20.7%          | 60.0%                   | 35         | 4      | 11.4%          | 40.0%                   | 0          | 0      | n/a            | n/a                     |
| 2021 | 41         | 9      | 22.0%          | 52.9%                   | 45         | 8      | 17.8%          | 47.1%                   | 0          | 0      | n/a            | n/a                     |
| 2022 | 26         | 4      | 15.4%          | 40.0%                   | 43         | 6      | 14.0%          | 60.0%                   | 0          | 0      | n/a            | n/a                     |

#Includes those who did not state their gender or declared it as Indeterminate/Intersex

#### Funded rates for CIs by gender

- More men than women applied as CIs in 2019, 2021 and 2022.
- The funded rate for male CIs is 1.8 percentage points higher than for female CIs in 2022.

#### Table 7. Statistics by CI gender - 2019, 2021 and 2022

| Maar | Female CI    |        |             |            | Ν            | 1ale Cl |             | CI gender other# |              |        |             |            |

#### Aboriginal and Torres Strait Islander health research

- NHMRC is committed to allocating at least 5% of the MREA each year to research directed at improving the health of Aboriginal and Torres Strait Islander peoples.
- Applications that address Aboriginal and Torres Strait Islander health represent 20% of the funds awarded.

| Indigenous identified/Indigenous focused                        | Year | Applications | Grants | Funded rate | Proportion of funds awarded |
|---|------|--------------|--------|-------------|-----------------------------|
|   | 2019 | 4            | 1      | 25.0%       | 10.0%                       |
| Aboriginal and Torres Strait Islander focused research          | 2021 | 6            | 2      | 33.3%       | 11.8%                       |
|   | 2022 | 3            | 2      | 66.7%       | 20.0%                       |
|   | 2019 | 5            | 1      | 20.0%       | 10.0%                       |
| Researchers of Aboriginal and/or Torres Strait Islander descent | 2021 | 10           | 3      | 30.0%       | 17.6%                       |
|   | 2022 | 8            | 2      | 25.0%       | 20.0%                       |
| Applications for Aboriginal and Torres Strait Islander          | 2019 | 1            | 1      | 100.0%      | 10.0%                       |
| focused research led by researchers of Aboriginal and/or        | 2021 | 2            | 1      | 50.0%       | 5.9%                        |
| Torres Strait Islander descent                                  | 2022 | 2            | 1      | 50.0%       | 10.0%                       |

#### Table 8. Statistics for Aboriginal and Torres Strait Island health research and researchers - 2019, 2021 and 2022

## Conclusion

- The 10 funded Synergy Grant teams now have 5 years of funding to tackle research questions that cannot be answered by a single investigator.
- The diversity of these teams is critical to the success of the projects.
- NHMRC will continue to monitor the outcomes of its grant program to determine whether it is meeting the stated objectives.
